

## TRIALOG NEWSLETTER 3 March 2018

### Blended Learning Mobility in Chemnitz (SOLARIS – Germany; 26/2/18 - 3/3/18)

During one week, 20 young people from Belgium and Romania participated in the project. They had the opportunity to take part in a practical training course in Chemnitz, offered by SOLRAIS in cooperation with 5 companies. Of course, the technical qualities and skills of the learners were discussed, but the 'soft skills' in particular were highlighted. Starting the journey together, sharing to live together, dealing with different cultures, carrying out assignments, communicating in another language, presenting a story and a presentation for a group, participating in a STEM competition ... the list of the continuing amazement and the many impressions our students took in this international context is endless.

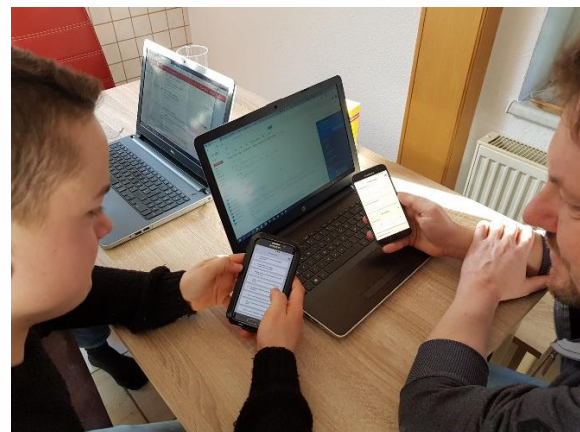

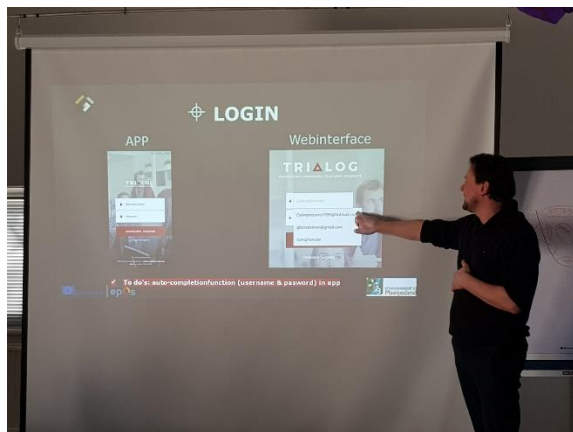

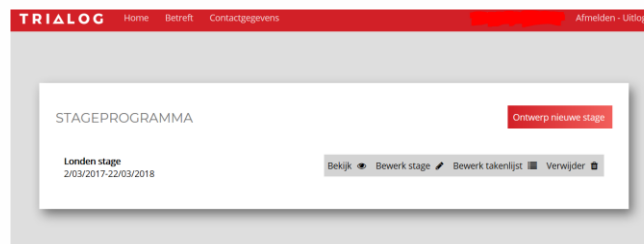

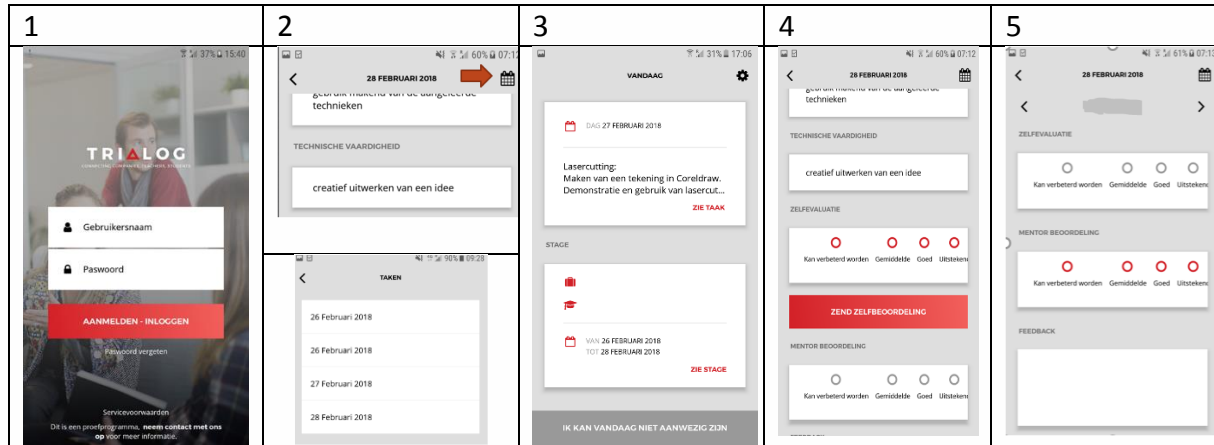

## The TRIALOG APP?

Since January 2017 we have been introduced to the TRIALOG APP, with its two components: WBTT work based teaching tool and WBLT work based learning tool:

1. The teacher and tutor use the web interface to design and implement the 'daily tasks' (both technical and soft skills) per internship day. <https://trialog.azurewebsites.net>

2. The APP can be downloaded on the smartphone (both Android and iOS for iPhone) and can be used and edited by the youngster, the teacher and the tutor, each in a specific role and application. After logging in (1) and selecting date (2) the selected skills become visible (3) in one screen where the student can also signal that he will be absent. After the task, the student must first submit a self-assessment (4) before the mentor can compare it (5).
