

TRIALOG NEWSLETTER 4, September 2018

The Trialog-team has been busy these past months. To share the outputs of the Trialog- project with a wider audience, each of the partners organised a multiplier event.

ITALY

Associazione Studio L&P organized their multiplier event on 10th July in Cagliari at EXMA, a place that is famous for cultural events. The idea was to invite a select number of experts from schools and professional sectors, who usually work with young people. There was an interesting debate about the use of the Trialog intellectual outputs inside schools, training agencies and enterprises. In particular, they discussed the importance of the evaluation of the WBL, a process that still appeared to be difficult for participants who came from schools and enterprises. The possibility to have a guide that could help teachers, tutors and also students, was very much appreciated.

ROMANIA

In Romania the two multiplier events have been organised by CRIO Vest, one regional (25th July in Timisoara) and one national (14th September in Sinaia), with more than 150 participants, all together.

During the event our Romanian partners received very useful feedback from the participants: students, teachers, tutors from companies, the Minister of education and inspectors. Now we know how to improve our Trialog app, and prepare it for further extension.

GERMANY

During the multiplier event in Chemnitz on 19th September, the participants learned more about the project history, and our partners presented them the project phases. They also received interesting feedback regarding the features, needs and issues that require further development.

BELGIUM

In Belgium the event took place on 29th May. The Belgian partners brought companies, educational staff, students and 'mystery guests' (mostly from different business sectors) together to discuss the Trialog app in small groups. While working, the participants enjoyed a 5-course meal, prepared by the students. This original, at the same time very tasteful and interactive approach, in combination with the information provided by the Belgian partners, was very much appreciated.
